Full-Stack Software Engineer

Full-Stack Software Engineer (3+ YOE) specializing in distributed scraping microservices, high-throughput pipelines, and applied LLM systems at Faber Company. Scaled a 3,000+ VPS fleet via Ansible ingesting 500k+ daily keywords (25M records/day), built enterprise AI features (OpenAI, Gemini, Claude), and led a 6-dev team as Scrum Master (100% on-time delivery).

Skills

Languages

Java, Typescript, Javascript, Python, SQL, HTML, CSS

Databases

MySQL, Amazon Aurora, PostgreSQL (Neon), Redis / Valkey, MongoDB

Framework

Backend: Spring Boot 3, Node.js, Next.js, Hono, NestJS, Encore.ts
Frontend: Next.js, React, Tailwind CSS, SASS
Testing: JUnit 5, WireMock, Testcontainers, Playwright

Cloud & Devops

AWS (SQS, ECS, S3, Secrets Manager, CloudWatch), Google Cloud Platform
Ansible (3,000+ VPS fleet), Docker, GitHub Actions CI/CD pipeline

Soft skills & teamworks

Scrum Master for 6-member team
Strong problem-solving mindset: Performance tuning, concurrency, system design
Clear communication: Led team discussions, helped align sprint goals
High ownership

Experience

Mieruca SEO

Faber Company
2024/01 – Present

Software Engineer & Part-time Scrum Master

Technical lead scaling high-throughput scraping infrastructure and shipping applied AI systems.

- **serp-api Microservice:** Architected scraping service (Java 21, Node.js, SQS) to ingest 500k+ keywords/day; led core scraping migration.
- **Fleet Scale (Ansible):** Automated 3,000+ VPS fleet via Ansible; optimized browser memory for high concurrency on ultra-constrained compute/memory nodes.
- **Failover Architecture:** Built multi-provider fallback (Bright Data, ScraperAPI, SerpApi) sustaining 99.9% uptime under anti-bot pressure and upstream outages.
- **AI Self-Healing Scrapers:** Built LLM tool to auto-repair broken DOM selectors with 1-click Slack approval for zero-downtime hot-reloads across 3,000+ nodes.
- **AI Article Builder:** Shipped enterprise content engine.
- **AIO Report:** Built Google AI Overview extraction pipeline to track citations and brand mentions as a first-to-market search intelligence feature.
- **Performance & Scale:** Adaptive thread throttling based on proxy health; cut query latency 70% and errors 90% via SQS.
- **Quality & Scrum Leadership:** Migrated tests to JUnit 5/WireMock; Scrum Master for 6 devs; closed ~2,300 tickets (97%) with 2,200+ peer kudos.

Projects

Chrome Scraper

2026/06 - Present

High-performance Google Chrome SERP/MEO scraper engine controlled via raw Chrome DevTools Protocol (CDP) WebSocket, Hono, and Cheerio.

- Profile Warmup Loop: Automated 24h background browsing (5 idle tabs, organic searches, real CTR clicks) accumulating Google NID cookies.
- Hybrid MEO Extraction: Devised 1 direct URL + in-box typing flow via xdotool, achieving a 0/50 CAPTCHA rate under aggressive geolocation loads.
- Production Container: Packaged into Docker running as non-root user without --no-sandbox, featuring Xvfb virtual display and noVNC stream.

Tech Stack: Node.js, TypeScript, CDP WebSocket, Hono, Docker (non-root), Cheerio

Sprint Planning Poker

2025/06 - 2025/08

<https://sprint-plann.web.app>

Reduced sprint delays from 30% to 0-5% by developing and globally deploying a collaborative estimation tool for Scrum teams. The tool supports real-time story point voting and sprint reports.

- Designed as a game to align team understanding and workload before sprint start; reduced sprint delays from 30% → 0-5%.
- Enabled real-time story point voting, sprint reports, and task rescheduling based on team feedback and capacity.
- Globally deployed with Next.js, Firebase Auth, Firestore, Ably WebSocket, and Tailwind CSS on GCP Cloud Run for scalability and low cost.
- Future plans: AI-assisted point suggestions, historical velocity tracking, and JIRA integration for workflow automation.

Tech Stack: Next.js, Firebase Auth, Firestore, Ably (WebSocket), Tailwind CSS, GCP Cloud Run

Stockis AI Trading Signals

2026/04 - 2026/05

<https://nhungocvnds.web.app/>

Full-stack AI-powered trading signal platform analyzing market trends and broadcasting automated alerts.

- Full-Stack Architecture: Next.js App Router deployed on Firebase App Hosting (Cloud Run) with Neon Serverless PostgreSQL and GCP Secret Manager.
- Applied AI Analysis: Integrated Anthropic Claude API for automated market technical analysis and trade recommendation generation.
- Background Worker: Independent Render worker for scheduled data ingestion, price tracking, and real-time alerts via Telegram Bot & Brevo email.

Tech Stack: Next.js, Claude API, Neon PostgreSQL, Cloud Run, Render, Telegram Bot
